		Hector A. Agdeppa	2642
The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply			
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).  - Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).  Status			
1)🛛	Responsive to communication(s) filed on 20 Ja	<u>uly 2001</u> .	
2a) <u></u> □	This action is <b>FINAL</b> . 2b)⊠ This	s action is non-final.	
3) 🗌	3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under <i>Ex parte Quayle</i> , 1935 C.D. 11, 453 O.G. 213.		
Disposition of Claims			
4)⊠ Claim(s) <u>1-17</u> is/are pending in the application.			
4a) Of the above claim(s) is/are withdrawn from consideration.			
5)	Claim(s) is/are allowed.		
6)⊠ Claim(s) <u>1-17</u> is/are rejected.			
7) Claim(s) is/are objected to.			
8) Claim(s) are subject to restriction and/or election requirement.			
Application Papers			
9) ☐ The specification is objected to by the Examiner.			
10) ☐ The drawing(s) filed on is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.			
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).			
11) ☐ The proposed drawing correction filed on is: a) ☐ approved b) ☐ disapproved by the Examiner.			
If approved, corrected drawings are required in reply to this Office action.			
12)☐ The oath or declaration is objected to by the Examiner.			
Priority under 35 U.S.C. §§ 119 and 120			
13) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).			
a) ☐ All b) ☐ Some * c) ☐ None of:			
1. Certified copies of the priority documents have been received.			
2. Certified copies of the priority documents have been received in Application No			
<ul> <li>3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).</li> <li>* See the attached detailed Office action for a list of the certified copies not received.</li> </ul>			
14) Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).			
a) ☐ The translation of the foreign language provisional application has been received.  15)☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

#### **DETAILED ACTION**

### Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1 – 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over
 Manning et al. in view of Rosen et al. and further in view of Bulfer.

Regarding claims 1, 3 – 6, 8 - 10, 12, 13, and 15 – 17, Manning et al. teaches a system and associated method of a parallel connected dialing signal transmission inhibiting device for data transfer over a telephone link, wherein a device may be connected to a telephone for the purpose of inhibiting DTMF signals going through or suppressing those signals to a central office when those DTMF signals are indicative of controls or simply any signal that should not be passed on to the central office for

Art Unit: 2642

processing. This could include the ability to control various household devices via a standard telephone unit or for programming of the actual phone as for example, speed dial, or even for the purpose of invoking special telephony features on that phone as for example, the above-mentioned speed dial. Manning et al. accomplishes this by teaching a device having therein a tone/signal generator 300 for generating tones to be sent to a central office if so needed, a DTMF/tone detector 210 for detecting when DTMF signals come either from the telephone network and represent an actual call or in the event when Manning et al.'s invention is used for voice messaging, controlling signals or whether they are control signals coming from the telephone unit, a microprocessor 400 and various electrical components for switching between having the telephone unit connected to a telephone network or not. (Abstract, Figs. 1 – 5B, Col. 1, line 53 – Col. 3, line 35, Col. 4, lines 14 – 50, Col. 7, line 10 – Col. 12, line 12)

What is not taught by Manning et al. is a data processing device being controlled or utilized via a telephone unit for telephony purposes.

However, Rosen et al. teaches communication with a computer using telephones, wherein a device allows DTMF tones from a telephone unit to be used to control telephony communication service or communication software resident on the computer, while allowing communication to and from a telephone network when need be. (Abstract, Figs. 1 – 5, Col. 1, line 26 – Col. 3, line 15, Col. 4, line 4 – Col. 12,line 48, Col. 16, line 1 – Col. 17, line 28)

Manning et al. and Rosen et al. both teach the use of a telephone for controlling a separate appliance, Manning et al. being limited to household appliances or the

Art Unit: 2642

telephone unit itself. It would have been obvious to have extended the invention of Manning et al. to include controlling telephony services on a computer inasmuch as computers can be considered to be simply another separate household appliance, and as taught by Rosen et al. it is useful to be able to control computers via telephone units for ease of operation, for convenience, remote operation, etc. Albeit that the invention of Rosen et al. functions in a slightly different manner that the invention of Manning et al. with respect to how signals are inhibited and how communication is achieved between computer and telephone, i.e., Rosen et al. teaches the use of voice recognition/commands via the telephone unit whereas Manning et al. teaches the use of DTMF tones for control.

However, it is very well known in the art to convert voice into DTMF tones for specifically the purpose of using voice commands as taught by Bulfer. (Abstract, Fig. 1 and 2, Col. 1, line 13 – Col. 2, line 46, Col. 3, line 10 – Col. 5, line 24) Furthermore, it is very well known in the art that many systems already convert voice into DTMF signals as this was once the only way for voice recognition commands to be implemented and recognized by telephonic systems.

Regarding claims 2 and 11, it is inherent or would be very obvious to have a unit or two separate units, as the multiplication of units performing the same function has no inventive function, for the purpose of separating DTMF from voice signals as claimed in the present invention. One simple example is when one would not want to send voice to the microprocessor 400of Manning et al. when programming it if it is not required. Ob

Art Unit: 2642

viously, only the DTMF control signals are necessary. Furthermore, if one were to send voice and DMTF tones simultaneously, a system would either never be able to detect what signals are for control or which actually comprise, for example, a conversation or if it could, it would be counter-intuitive to not separate them as DTMF and voice signals many times have different functions.

Regarding claims 7 and 14, as already mentioned, the multiplication of parts does not necessarily provide inventiveness, as is the case with the instant invention and it's use of multiple DTMF detectors. As such, while Manning et al. teaches only one DTMF/tone detector, it would have been obvious to one skilled in the art to have implemented the use of more than one DTMF/tone detector as a matter simply of design preference inasmuch as the functionality of Manning et al.'s DTMF detection would simply be "spilt up."

## Response to Arguments

2. Applicant's arguments with respect to claims 1 - 17 have been considered but are moot in view of the new ground(s) of rejection.

#### Conclusion

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hector A. Agdeppa whose telephone number is 703-305-1844. The examiner can normally be reached on Mon thru Fri 9:30am - 6:00pm.

Art Unit: 2642

Page 6

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ahmad Matar can be reached on 703-305-4731. The fax phone numbers for the organization where this application or proceeding is assigned are 703-746-5858 for regular communications and 703-308-5403 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-305-4700.
